

Microsoft Edge & Privacy- Preserving Web Identity

Melanie Richards & Erik Anderson

Microsoft Edge Web Platform

Protection

We will help keep you safe on the web and prevent unauthorized access of your browsing data.

Transparency

We will give you visibility into how your browsing data is collected and used so you can make informed decisions.

Control

We will empower you to take control of your browsing data and choose how it can improve your experiences.

Respect

We will honor your choices about browsing data and collect only what is needed to make your experiences better.

About Microsoft Edge

Hi Katy, we value your privacy.
We will always protect and respect your privacy, while giving the transparency and control you deserve. [Learn more](#)

Tracking Prevention

Websites use trackers to collect info about your browsing. This info is used to improve sites and show you content like personalized ads. Some trackers collect and send your info to sites you haven't visited.

Tracking prevention

Basic

- Allows most trackers across all sites
- Content and ads will likely be personalized
- Sites will work as expected
- Blocks known harmful trackers

Balanced

(recommended)

- Blocks trackers from sites you haven't visited, or that don't meet our strict privacy standards
- Content and ads will likely be less personalized
- Sites will work as expected
- Blocks known harmful trackers

Strict

- Blocks a majority of trackers from all sites
- Content and ads will likely have minimal personalization
- Parts of sites might not work
- Blocks known harmful trackers

View trackers

Trackers that have been seen across your browsing

Exceptions

Allow all trackers on sites you choose

Always use "Strict" when browsing InPrivate

Clear browsing data

This includes history, passwords, cookies, and more. Only data from this profile will be deleted.

Principles for vNext Federated Auth

The solution space should:

- Protect against passive cross-site tracking; enable disambiguation of identity flows vs. obfuscated tracking behaviors
- Support a spectrum of IDP/RP enlightenment, with user transparency and control over flow of data
- Enable an interoperable approach for IDPs, RPs
- Specify and constrain only as much as needed for clarity + consistency, so that identity communities can continue to innovate
- Mitigate breakage to existing identity flows in short term; provide a well-lit path to migrate to vNext techniques

Where we're at

Early in this journey

- Incubating IsLoggedIn with the W3C Privacy CG (*not a solution to facilitate federated auth flows, but a potentially useful signal*)
- Evaluating and raising issues on WebID and First Party Sets
- Shipped Storage Access API in Microsoft Edge (contributed to Chromium)
- Potentially interested in exploring something like SAA tailored for identity-specific flows

Looking forward to collaboration

- Want to collaborate on a community-driven solution, leveraging the best of everyone's knowledge (identity experts, browser vendors, privacy advocates, web developers)
- Interested in a shared public venue for discussion
- Thank you for meeting up this week!

Thank you!
